### **REASONS FOR ALLOWANCE**

1. The following is an examiner's statement of reasons for allowance:

Paltenghe et al., U.S. Pub. No. 2002/0004783 discloses apparatus, methods and systems for information and financial banking. Apparatus of the present invention include virtual wallets which allow for information and financial banking including payment mechanisms; identity authentication mechanisms; personal information; and electronic artifacts. Methods and systems of the present invention include information and financial banking methods utilizing virtual wallets. A preferred virtual wallet comprises a locally residing portion and a server residing portion. An interface is provided for communication between the two portions of the wallet.

Chen et al., U.S. Pat. No. 5,590,197 discloses an electronic payment system and method which uses a "cyber wallet." The cyber wallet consists of information and files which enable the holder to safely carry out transactions requiring electronic payment over an open communications network, as well as hardware necessary to carry out the transactions. The cyber wallet is in a form which may be "carried" on a tamper resistant portable electronic storage medium such as a smartcard, or stored on the customer's computer (or personal digital assistant, PCMCIA card, or the like) together with the browser/mosaic software.

First SET transaction on the internet (Anonymous; Financial Technology International Bulletin) discloses an initiative by international payment card organisations,

Visa, Europay and MasterCard, have agreed to create a specification for the use of smart card technology over the Internet. The new standard will amalgamate the existing EMV chip card specs with the SET protocol for online credit card payments. The EMV specification contains standards relating to integrated circuit cards for payment systems and establishes the financial industry's first global chip card payment infrastructure. In parallel, the SET standard secures bank card transactions on open networks using encryption technology. The amalgamation of the two will provide additional safeguards for online shopping due to the chip's ability to perform card authentication and optional cardholder verification as well as to store cryptographic keys and digital certificates. A chip card is also able to execute cryptographic functions by itself. The new specs will be applicable over a variety of online access devices, including network computers, set-top boxes, PCs or cellular telephones.

None of the prior art, alone or in combination, teaches or suggests the following:

**Claim 2**

conducting the payment transaction by the remote wallet server with the merchant computer in a format compliant with a chip card electronic commerce protocol or specification, wherein the remote wallet server and the issuer institution have a shared secret data object;

generating a cryptogram by the remote wallet server based on the shared secret data object between the remote wallet server and the issuer institution;

**Claim 4**

a storage unit having stored therein a secret data object that is shared with the issuer institution;

means for generating a cryptogram by the remote wallet server based on the secret data that is shared between the remote wallet server and the issuer institution;

**Claim 6**

wherein the remote wallet server and the issuer institution have a shared secret data object, the method comprising:

receiving a request by the remote wallet server from the consumer computer for conducting a payment function with the merchant computer; generating a cryptogram by the remote wallet server based on the shared secret data object between the remote wallet server and the issuer institution, regardless of whether or not the payment card of the consumer involved in the payment transaction is a chip card or a non-chip card;

**Claim 8**

the wallet server at a location remote from said consumer, comprising:  
a microprocessor unit; a memory unit coupled to the microprocessor unit;  
a storage unit having stored therein a secret data object that is shared with the issuer institution;

means for generating a cryptogram by the remote wallet server based on the secret data that is shared between the remote wallet server and the issuer institution,

regardless of whether or not the payment card of the consumer involved in the payment transaction is a chip card or a non-chip card;

***Allowable Subject Matter***

2. Claims 2, 4-6, 8 and 10 are allowed.
  
3. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

***Conclusion***
